

Dr. Fiona Conway is an Associate Professor at the School of Social Work at The University of Texas at Austin. Her research focuses on substance use behaviors, emphasizing recovery support services, digital health solutions, and substance use among adolescents and young adults. She also collaborates with biomedical scientists to investigate the relationships between behavioral health and human biology. She is particularly interested in the relationships between psychological distress, neurocardiac self-regulation, and substance use. Her interdisciplinary research seeks to facilitate the transfer of new and innovative scientific strategies to substance use prevention specialists and treatment providers.
